The housing market – Price development

Source: Norges Bank, Statistics Norway, Eiendomsverdi, Updated March 2014

- Nominal house prices have increased by an average of 6.6 % per annum since 1985. However, when deflated by income growth (5.9% per annum since 1985) the increase in house prices has been very moderate
- The housing market has been spurred by strong economic activity, environment of low interest rates, wage increases, population growth and supply constraints
- Over the recent months the housing market has shown signs of stabilisation and prices have been levelling off. This is reflecting measures taken by the authorities including higher risk weights on mortgages and increased capital requirements for banks

The operating environment

The housing market – Drivers of the housing market

Source: Statistics Norway, updated July 2014

Source: Statistics Norway, updated Q2 2014. Estimate 2014 is based on the assumption Q3-Q4 = Q2 for net immigration and excess births

- Shortage of new housing supply and a strong population growth have been significant drivers of the strong price growth in the Norwegian housing market since 2008
- New home construction is up from the record low levels of 2009 and 2010 and has recently evolved towards the higher end of the range. This should mitigate the momentum on house prices going forward
- The population growth of 1.0 % p.a. since 1997 has been driven both by excess birth rate (38%) and net immigration (62%)
